

**St. Theresa Catholic School**  
**2024 Summer Math Requirements**  
**New Students Entering Grade 7**

Welcome to St. Theresa, and congratulations on finishing 6th grade!

During 7th grade math, you will continue your journey towards preparing to study **algebra!** For you to succeed in math next year, it is important that you are confident in your math skills from 6th grade.

Just like practicing your favorite sport helps you maintain and develop your skills, **you need to practice math** to help you maintain and strengthen your knowledge from 6th grade!

You have two ways to do this during the summer. You and your parents should choose one option **within the first week of summer** and make a plan for how you will complete all of the work. Your summer work will be the first grade you receive in math when you get back to school in August.

**Option 1**

Complete a [Summer Math Enrichment class at Brophy College Preparatory](#). You must bring the certificate of completion with you on your first day of school in August. You will not receive credit for this option if you miss more than one full day of class at Brophy.

**Option 2**

Work through a Spectrum Math workbook. You will have to complete **all odd numbered problems** in the workbook for credit. Each page has a mini-lesson to help you if you forgot a topic. There are also QR codes to scan for a video lesson if you need even more help.

I recommend you complete **about 20 pages a week** rather than cramming this all in at the end of summer. Each page should take 1-3 minutes if you are focused.

[Purchase the 6th grade review workbook here.](#)

\*\*If you are very motivated about growing your math skills and would like to get ahead on what you'll be learning next year, you can purchase and complete the [7th grade review workbook](#) instead.
